It currently consists of 44 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      as soon as in

Sequence 2048, Application US/09833381

Patent No. US20020132090A1

GENERAL INFORMATION:
APPLICANT: Robison, Keith E.

ITILE OF INVENTION: No. US20020132090A1el Nucleic Acid and Protein Homologs
FILE REFERENCE: 5800-119

CURRENT APPLICATION NUMBER: US/09/833,381

CURRENT EILING DATE: 2001-04-11

PRIOR APPLICATION NUMBER: 09/516,448

PRIOR FILING DATE: 2000-02-29

NUMBER OF SEQ ID NOS: 2050

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 2048

LENGTH: 1648

TYPE: DNA

ORGANISM. USO Cariens

Sequence 2804, Application US/09764877
Patent No. US20020147140A1
GENERAL INFORMATION:
APPLICANT: Rosen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins, FILE REFERENCE: PC005
CURRENT APPLICATION NUMBER: US/09/764,877
CURRENT FILING DATE: 2001-01-17
PRIOR APPLICATION data removed - refer to PA
NUMBER OF SEQ ID NOS: 4031
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 2804
LENGTH: 9732
TYPE: DNA
ORGANISM: Homo sapiens

GENERAL INFORMATION:

APPLICANT: Penn, Sharron G.

APPLICANT: Hanzel, David K.

TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACII

TITLE OF INVENTION: EXPRESSION ANALYSIS TWO

FILE REFERENCE: AEOMICA-X-2

CURRENT APPLICATION NUMBER: US/10/029,386

CURRENT FILING DATE: 2001-12-20

NUMBER OF SEQ ID NOS: 34288

SEQ ID NOS: 34288

SEQ ID NOS: 34288

SEQ ID NOS: 34288

SEQ ID NOS: 34288

LENGTH: 510

GENERAL INFORMATION:

APPLICANT: Rosen, Glenn

APPLICANT: Rao, Peter

ITILE OF INVENTION: Synergistic Anti-Cancer Therapy with

ITILE OF INVENTION: Triptolides and Death Domain Ligands

FILE REFERENCE: SUN-109FNV2

CURRENT APPLICATION NUMBER: US/09/505,250A

CURRENT FILING DATE: 2000-02-15

NUMBER OF SEQ ID NOS: 4

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 1

LENGTH: 1769
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APPLICANT: DEEN, KEITH C.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The patent discloses human uridine kinase-like polypeptides, designated CC 57658 and polynucleotides encoding such proteins. 57658 DNAs and proteins CC are useful for developing diagnostic and therapeutic agents for 57658-CC mediated or related disorders such as haematopoletic neoplastic disorders (e.g. leukaemia), haematopoletic disorders (e.g. psoriasis, dermatitis, Cd diabetes mellitus, rheumatoid arthritis, disorders of bone (e.g. rickete, CC esteoporosis), heart (e.g. sarcoma, myocardial infarction), blood vessels (e.g. hypertension, atherosclerosis) and neurons (e.g. Huntington's CC disease, Alzheimer's disease, Parkinson's disease), detection assays (e.g. CC prognostic biology) and predictive medictine (e.g. diagnostic assays, CC prognostic assays, and monitoring clinical trials and pharmacogenomics). They are useful as reagents for diagnosing and treating 57658-mediated CC disorders. 57658 DNAs are useful in gene therapy, in chromosome mapping, CC to identify an individual from a minute biological sample. The CC and to aid in forensic identification of the biological sample. The CC present sequence is a DNA encoding human 57658 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

             The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huncington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinjoinhibin activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                          Tang
